SUPPLEMENTAL ACTION

1. This action is supplemental to the previous Office action No. 20041208, including all matters set forth in the previous Office action, and further indicates the allowance of claims 22-27 that was not mentioned in the previous Office action. Applicant should ignore the previous Office action and response only to this supplemental Office action.

2. Claims 1-5, 12 and 16-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claim 1, lines 9-10, the recitation "after all XOR connections are traversed a result E" is indefinite as to what it means. Further, "2n-2", line 7, should be - 2n-1 --.

Appropriate correction is required.

As per claim 12, line 1, the recitation "a finite field multiplier according to claim 5" is indefinite. It should be according to claim 6.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 2124

4. Claims 1 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumoto et al. (4,918,638).

Matsumoto et al. discloses in figures 1,5 and 7 a multiplication of first (P) and second (Q) elements of a Galois field GF 2ⁿ. The multiplication includes forming in an addition part (11) an intermediate result (R) of bit width 2n-1, and processing the intermediate result Z in a reduction part (12) by modulo dividing by a polynomial (K) to produce a result (S) as claimed. It is noted that Matsumoto et al. does not specifically disclose first and second input registers as claimed. However, since such input registers for loading input data to a processing device are well-know in the art. A person of ordinary skill in the art would have found it obvious to provide Matsumoto et al. with input registers as claimed in order to maintain the states of the input signals during processing and thus to reduce errors.

- 5. Claims 6-11 and 13-15 and 21-27 are allowed.
- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuong D Ngo whose telephone number is (571) 272-3731. The examiner can normally be reached on Tuesday-Friday.
